

JSP

Create java package

- Java with marven
- web application

The dialog box is titled "New Web Application". On the left, a "Steps" sidebar lists: 1. Choose Project, 2. Name and Location (highlighted), and 3. Settings. The main area is titled "Name and Location" and contains the following fields: "Project Name" with the value "date", "Project Location" with the value "/Users/yeshansamarawickrama/NetBeansProjects" and a "Browse..." button, "Project Folder" with the value "s/yeshansamarawickrama/NetBeansProjects/date", "Artifact Id" with the value "date", "Group Id" with the value "com.mycompany", "Version" with the value "1.0-SNAPSHOT", and "Package" with the value "com.mycompany.date" and a "(Optional)" label. At the bottom, there are buttons for "Help", "< Back", "Next >" (highlighted in blue), "Finish", and "Cancel".

Steps

1. Choose Project
2. **Name and Location**
3. Settings

Name and Location

Project Name:

Project Location:

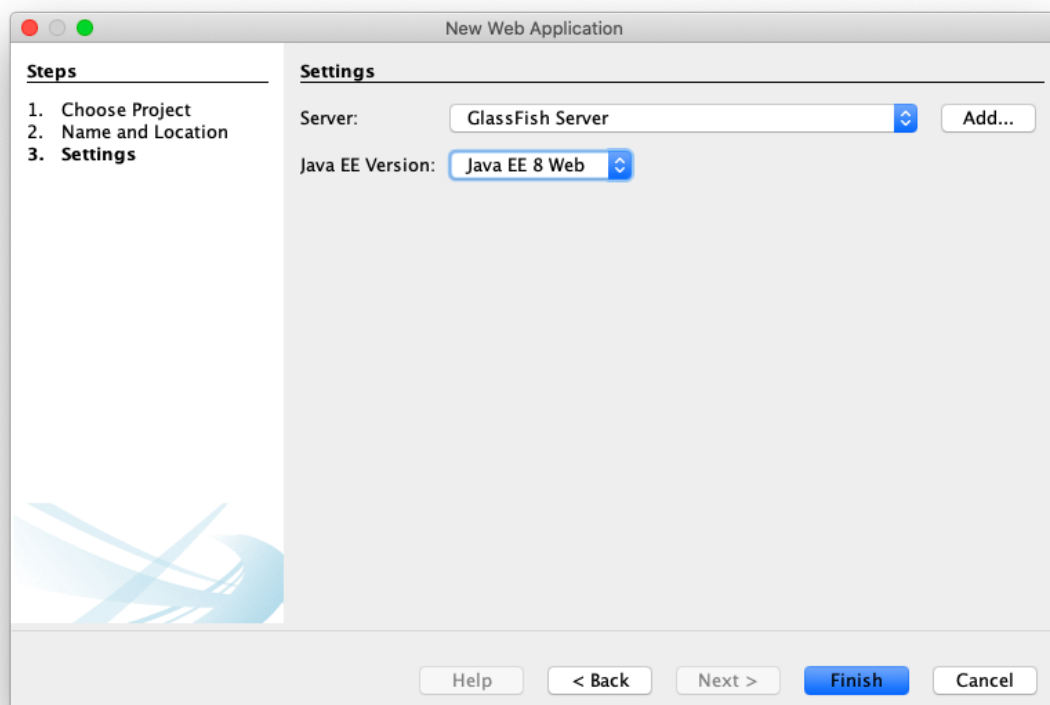

Project Folder:

Artifact Id:

Group Id:

Version:

Package: (Optional)

The dialog box is titled "New Web Application". On the left, a "Steps" sidebar lists: 1. Choose Project, 2. Name and Location, and 3. Settings (highlighted). The main area is titled "Settings" and contains the following fields: "Server" with a dropdown menu showing "GlassFish Server" and an "Add..." button, and "Java EE Version" with a dropdown menu showing "Java EE 8 Web". At the bottom, there are buttons for "Help", "< Back", "Next >", "Finish" (highlighted in blue), and "Cancel".

Steps

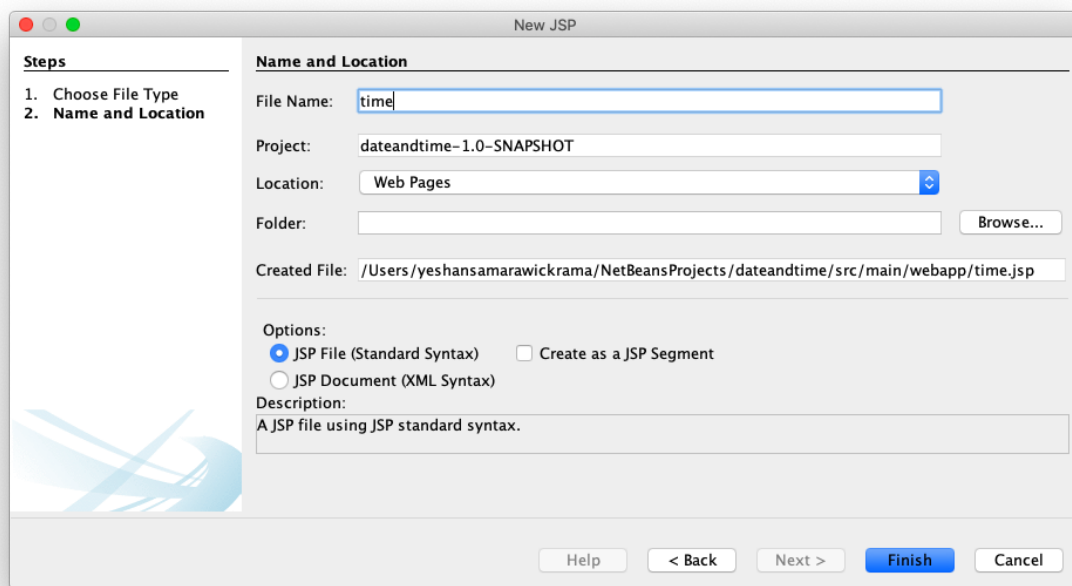

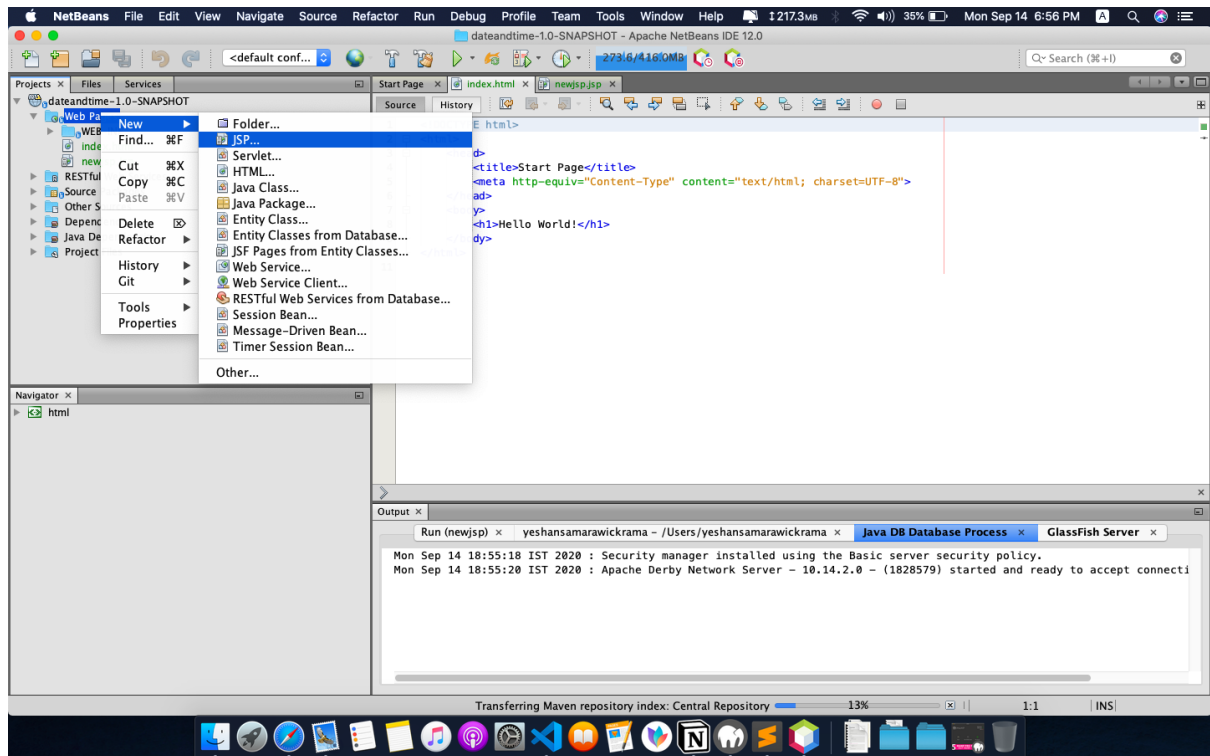

1. Choose Project
2. Name and Location
3. **Settings**

Settings

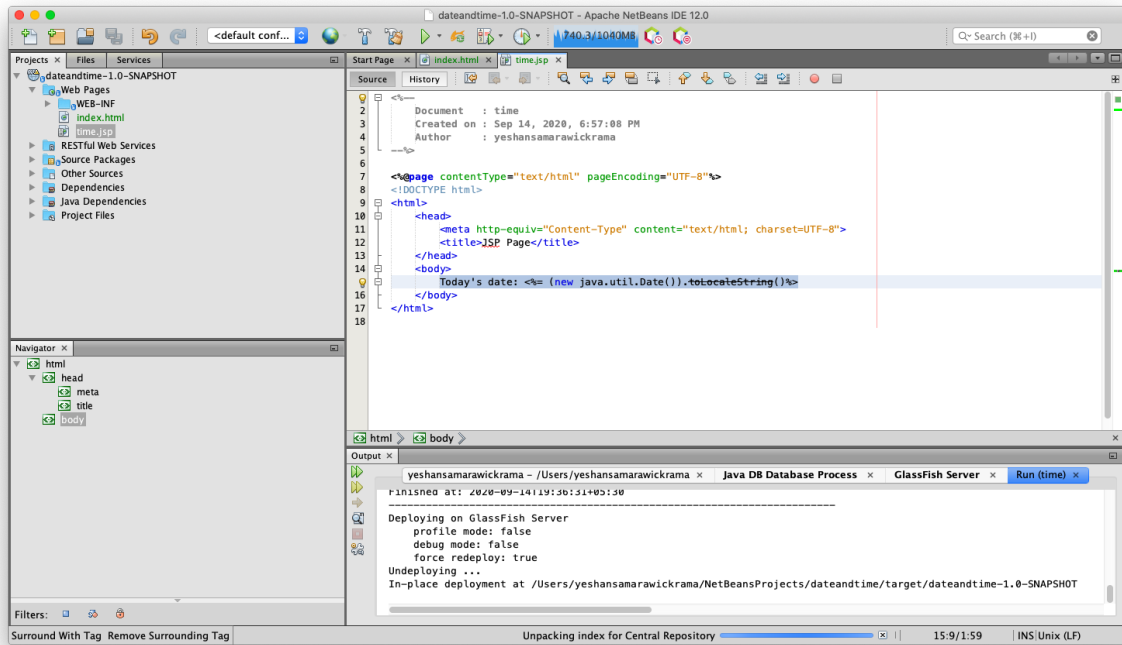

Server:

Java EE Version:

Now create JSP file inside web-inf folder

Now time print code line

Then run the file
